* Loose terminals in this chart have a center cut-off tab. They cannot be removed from the reel by manual cutting them. An applicator must be used when using reel terminals or the terminals will not function properly

Operation:

Individual terminals may be removed from the housing using this extractor tool.

1. Push the terminal forward in the housing so that the locking tang is clearly visible.
2. Insert the tool into the interface opening (slot) of the connector housing on an angle as shown in Figure 1.
3. Rotate the extractor tool into the position shown in Figure 2. This will depress the locking tang of the terminal and allow the terminal to be removed by gently pulling on the wire.

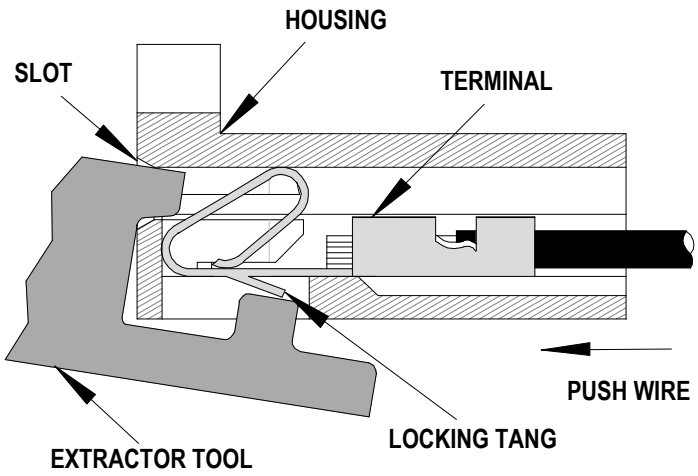

Figure 1

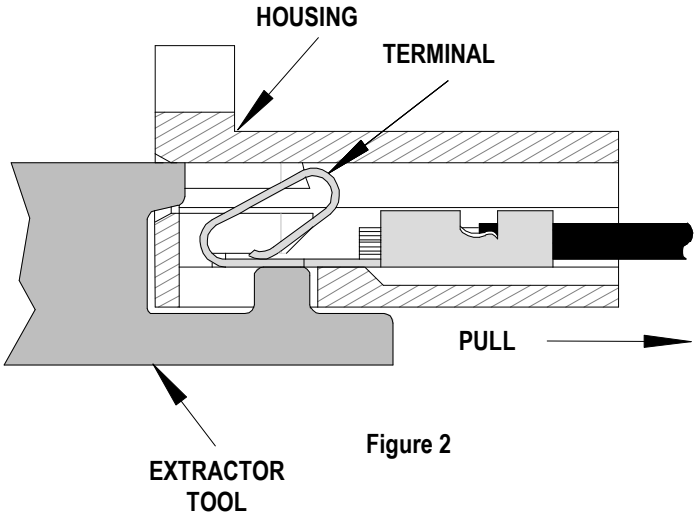

Figure 2

CAUTION: This extractor tool should be used to extract the terminal only. Using it for unintended purposes may cause injury or damage to parts. Be careful not to deform the end of the terminal.

CAUTION: Molex specifications are valid only when used with Molex terminals, applicators and tooling.

Molex does not offer repair parts for Extractor Tools due to the inexpensive nature of these tools.
