**SELECT CORRECT JUMPER SETTING
FOR VOLTAGE USED**

Installation Above Door

1. Check off the contents and ensure you have the tools required.
2. Use the drill template to install the L bracket Item 19 above the door.
3. Check the door still closes.
4. Fit the maglock to the L bracket using 2 Security Screws Item 1C.
5. Assemble both Z plates and the Armature plate together as shown.
6. Close the door and use the Z plate to mark the door for drilling.
7. Fit the Armature assembly to the door.
8. Check that the Armature plate and mag lock are aligned.
9. Use rubber spacer washers (or use alternate Z bracket fixing postions) to ensure that the Armature plate and Mag Lock just touch.
10. Set the jumper to correct voltage, connect wiring and test. Replace cover plate.

Installation Inside Frame

1. Check off the contents and ensure you have the tools required.
2. Use the drill template to install the mounting bracket Item 1A inside the door frame.
3. Drill frame for cable entry and run cable for maglock.
4. Fit the maglock to the bracket using 2 Security Screws Item 1C.
5. Close the door and use the armature to mark the door for drilling.
6. Fit the Armature to the door.
7. Make sure the Armature and mag lock are aligned.
8. Use spacer washers to get the Armature plate and Mag Lock to just touch.
9. Set the jumper to correct voltage, connect wiring and test.

Adjust the gap between lock and armature plate by adding /removing spacer washers Items 13 & 14

Installation for Sliding Door

1. Check off the contents and ensure you have the tools required.
2. Use the drill template to install the mounting bracket Item 1A to the door frame.
3. Fit the maglock to the bracket using 2 Security Screws Item 1C.
4. Close the door and use the Z plate item 17 to mark the door for drilling.
5. Fit the Z plate and Armature to the door.
6. Make sure the Armature and mag lock are aligned.
7. Use spacer washers to get the Armature plate and Mag Lock to just touch -----
8. Set the jumper to correct voltage, connect wiring and test.
