Series 82

Robust and attractive.

https://eao.com/82

82

Key advantages

- Vandal-resistant: Impact resistant to IK10
- Front protection up to IP67
- Gold-plated silver contacts available for low voltages and currents
- Optional illumination and laser markings
- Excellent tactile feedback
- Long service life: > 1 million cycles of operation
- Stainless steel anodised aluminium or brass coloured switches
- 16 mm, 19 mm or 22 mm mounting

Typical application areas

- Exposed public areas: e.g. ticketing and vending machines
- Industrial: Machinery and factory equipment
- Lifting and moving: Elevators and people movers
- Building management: Access control and security systems
- Audio and video equipment
- Medical equipment
- Food Industry (corrosion and acid resistant versions available on request)

Functions

- Push button
- Illuminated push button
- Indicator
- Illuminated selector switch
- Keylock switch

Design

- Flush

IP front protection

- IP65
- IP67

Mounting cut-outs

- Ø 16 mm
- Ø 19 mm
- Ø 22 mm

Terminal

- Plug-in terminal
- Screw terminal
- Connector M12
- Cable with connector M12
- Cable

Lens Material

- Aluminium
- Stainless steel
- Brass
- Plastic metalised

Markings

- Laser marking

Approvals

- CB
- UL
- C UL
- CCC

Conformities

- CE
- UKCA
- 2014/35/EU (LVD)
- 2011/65/EU (RoHS)

82 Marking

General notes

1. Laser marking
Using laser technology, the Series 82 stainless steel version can be marked with almost any symbol or text in any language.
Laser marking is very resistant, hardly fades and is exceptionally durable. These are the ideal characteristics of vandal-resistant indicators, pushbuttons and illuminated pushbuttons.

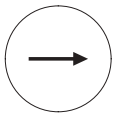

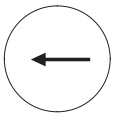

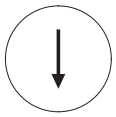

2. Versions
The laser 2D-technology can mark all stainless steel versions with flush lenses – flush-mounting as well as raised versions.

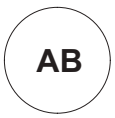

3. Symbols, colours
Basically, all symbols and texts can be marked in all languages.
Therefore, we need electronic DXF-file only. All symbols or texts are marked in anthracite/dark grey.

4. Part number
Each symbol is given a continuous number. It will be combined with the configured part number to get the complete part number, see overview part number system.

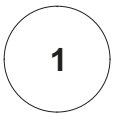

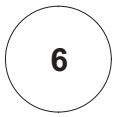

5. Standard symbols
Several standard icons are available:

Suppressor circuits

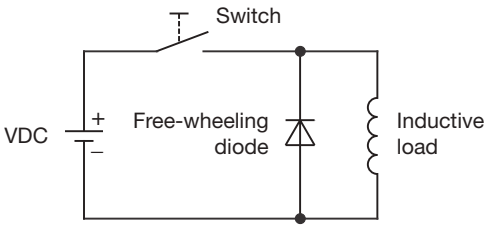

When switching inductive loads such as relays, DC motors, and DC solenoids, it is always important to absorb surges (e. g. with a diode) to protect the contacts. When these inductive loads are switched off, a counter emf can severely damage switch contacts and greatly shorten lifetime.

Fig. 1 shows an inductive load with a free-wheeling diode connected in parallel. This free-wheeling diode provides a path for the inductor current to flow when the current is interrupted by the switch. Without this free-wheeling diode, the voltage across the coil will be limited only by dielectric breakdown voltages of the circuit or parasitic elements of the coil. This voltage can be kilovolts in amplitude even when nominal circuit voltages are low (e. g. 12 VDC) see Fig. 2.

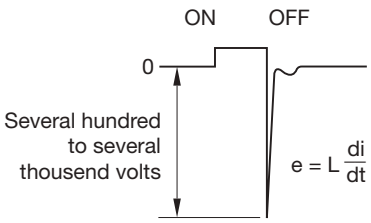

The free-wheeling diode should be chosen so that the reverse breakdown voltage is greater than the voltage driving the inductive load. The DC blocking voltage (VR) of the free-wheeling diode can be found in the datasheet of a diode. The forward current should be equal or greater than the maximum current flowing through the load.

To get an efficient protection, the free-wheeling diode must be connected as close as possible to the inductive load!

Earthing required for applications from 60 V AC / DC

For applications with an operating voltage from 60 V AC / DC upwards, metal panels and metal buttons must be permanetly earhed with an earth conductor (1,5 mm²) with yellow and green sheathing.
