

Applications

- Transient voltage protection
- High-voltage switches
- Crowbar
- Lasers
- Pulse generators

Application Note H - 6

Remark: For special selection of more than 2 pieces IXBOD 1-... for every break down voltage of $V_{BO} > 2000 \text{ V}$ please contact us.

Single Breakover Diode

$$V_{BO} = 600-1000V$$

$$I_{AVM} = 0.9 A$$

V_{BO} V	Standard Types
600 ±50	IXBOD 1 -06

Fig. 7 On-state voltage at $T_{vj} = 125^\circ\text{C}$.

Fig. 8 Transient thermal resistance.

Application

Protection of thyristors against overvoltages in forward direction.

$$V_{BO}(T_{VJ}) = V_{BO, 25^{\circ}C} [1 + KT(T_{VJ} - 25^{\circ}C)]$$

Calculation example

- a. The maximum junction temperature shall be calculated for a module IXBOD 1 -30R at an ambient temperature $T_a = 60^{\circ}C$, an exponentially decaying current $I_{TM} = 40A$, a pulsewidth $t_p = 2 \mu s$, an operating frequency $f = 50 \text{ Hz}$ and natural convection. From the diagram Fig. 6 the energy per pulse is obtained:

$$E_{p1} = 6 \times 10^{-3} \text{ Ws}$$

For a module IXBOD1-30R the number of single IXBOD elements is:

$$n = 3$$

At natural air cooling the thermal resistance junction to ambient amounts to (Fig.8):

$$R_{thJA} = 20K/W$$

and the unknown temperature can be calculated as:

$$T_{VJmax1} = T_a + n \cdot f \cdot E_p \cdot R_{thJA} + K_p \cdot E_p$$

$$T_{VJmax1} = 60 + 18 + 4.2 = 82.2^{\circ}C$$

- b. If following these steady-state conditions an overload for 1 minute occurs with $I_{TM} = 60 \text{ A}$ and a pulse-width $t_p = 4 \mu s$ at the same operating frequency $f = 50 \text{ Hz}$, then the resulting maximum junction temperature is calculating as follows:

$$T_{VJmax2} = T_{VJmax1} + (E_{p2} - E_{p1}) \cdot n \cdot f \cdot Z_{thJA}(t) + K_p \cdot (E_{p2} - E_{p1})$$

The diagrams Fig. 11 and Fig. 8 show

$$E_{p2} = 14 \times 10^{-3} \text{ Ws}$$

$$Z_{thJA}(t = 1 \text{ min}) = 12K/W$$

From what follows:

$$T_{VJmax2} = 82.2 + 14.4 + 5.6 = 102.2^{\circ}C$$

which is allowed because the maximum admissible junction temperature $T_{VJM} = 125^{\circ}C$.

Example of a circuit

A simple emergency triggering circuit.

- T : Thyristor
 R_1 : Current limiting resistance (0 - 200 Ω)
 D_1 : Series-diode (fast recovery diode)
 D_3 : Protection diode
 D_4 : Zener diode, typical V_Z : 3-6 V
 R_2, C_2 : Protection against parasitic triggering;
 recommended values:
 R_2 : 100 - 1000 Ω
 C_2 : 22 - 47 nF
 R_3, C_3 : Snubber network of the thyristor

Notice

1. A IXBOD element has a maximum reverse blocking voltage of 10V.
2. For higher reverse voltages a fast, soft recovery diode must be connected in series (Fig. 9). This diode must fulfill the conditions of Fig. 10.

Fig. 9 IXBOD protection by a fast recovery diode.

Fig. 10 Maximum peak value of the reverse current admissible for a given pulse-width t_B , which is required for the suitable fast recovery series-diode.
