

PRODUCT SPECIFICATION

RIGHT ANGLE LOW PROFILE CAT 3 MODULAR JACK

1.0 SCOPE

This specification covers the performance requirements of the Molex Right Angle Low Profile Cat 3 Modular Jacks. Where applicable, tests are in accordance with, or in excess of all requirements specified in IEC 60603-7.

2.0 PRODUCT DESCRIPTION

2.1 PRODUCT NAME AND SERIES NUMBER(S)

95501-**** r/a low profile pc jack through hole version.

95501-**** r/a low profile pc jack smt version.

85722-**** r/a pc jack through hole version.

85502-**** r/a low profile smt jack with solder pegs.

Jacks are available in 8, 6 or 4 circuit sizes.

The 6 circuit size can be loaded with either 6 or 4 contacts.

2.2 DIMENSIONS, MATERIALS, PLATINGS AND MARKINGS

See the appropriate sales drawings for information on dimensions, materials, plating and markings.

Contact Finish: Gold

post plate 0.00127mm-0.00152mm gold in contact area.

0.00190mm min pure tin in tail area, both over 0.00127mm min nickel overall.

or,

Palladium Nickel With Gold Flash:

post plate 0.00005mm min gold flash over 0.00060mm min palladium nickel in contact area,

0.00190mm min pure tin in tail area, both over 0.00127mm min nickel overall.

3.0 APPLICABLE DOCUMENTS AND SPECIFICATIONS

See the appropriate Sales Drawings and the other sections of this specification for the necessary referenced documents and specifications.

PRODUCT SPECIFICATION

5.0 TEST SCHEDULES

The following tests specify the characteristics to be checked and the requirements to be fulfilled.

For a complete test sequence, a minimum of 62 specimens are needed. This equals 6 groups of 10 and 1 group of 2, the group of 2 shall be for Group EP.

All specimens shall be subjected to the following tests. All the test group specimens shall be subjected to the preliminary group P tests in the following sequence.

The specimens shall then be divided into the appropriate number of groups. All connectors in each group shall undergo the following tests as described in the sequence given.

Test group P

TEST PHASE	TITLE	SEVERITY	REQUIREMENTS
P 1	GENERAL EXAMINATION PER IEC 60512-1-1, Test 1a	Visual examination	There shall be no defects that would impair normal operation
P2	N/a		
P 3	CONTACT RESISTANCE IEC 60512-2-1, Test 2a	Mated connectors: (Measurement points per section 7.0)	Initial 20 mΩ maximum
P 4	INSULATION RESISTANCE IEC 60512-3-1, Test 3a, Method a.	Test voltage 100 V d.c. mated connectors	500 MΩ Minimum
P 5	VOLTAGE PROOF IEC 60512-4-1, Test 4a, Method a.	Contact/contact Method A Mated C	1000 V d.c. or a.c. peak

		APPROVED BY: S.Griffin	

PRODUCT SPECIFICATION

Test group AP

TEST PHASE	TITLE	SEVERITY	REQUIREMENTS
AP 1	INSERTION AND WITHDRAWAL FORCES PER IEC 60512-13-2, Test 13b	Connector locking device depressed.	Insertion force 20 N max, Withdrawal force 20 N max.
AP 2	EFFECTIVENESS OF CONNECTOR COUPLING DEVICE PER IEC 60512-15-6 Test 15f	Rate of load application 44,5 N/s maximum	50 N for 60 s $\pm$ 5 s
AP 3	RAPID CHANGE OF TEMPERATURE PER IEC 60068-2-14	-40°C to 70°C Mated connectors 25 cycles t = 30 min recovery time 2 h	
AP 4	INSULATION RESISTANCE IEC 60512-3-1, Test 3a, Method a.	Test voltage 100 V $\pm$ 15 V d.c. Method A MATED CONNECTORS	PER P4
AP 5	CONTACT RESISTANCE IEC 60512-2-1, Test 2a	PER P3	20 m Ω maximum change from initial
AP 6	VOLTAGE PROOF IEC 60512-4-1, Test 4a, Method a.	PER P5	PER P5
AP 7	VISUAL EXAMINATION	PER P1	PER P1
AP 8	CYCLIC DAMP HEAT PER IEC 60068-2-38	21 cycles low temperature 25°C high temperature 65°C cold subcycle -10°C humidity 93 % Half of the samples in mated state Half of the samples in unmated state	
AP 9	CONTACT RESISTANCE IEC 60512-2-1, Test 2a	PER P3	20 m Ω maximum change from initial

PRODUCT SPECIFICATION

Test group BP

TEST PHASE	TITLE	SEVERITY	REQUIREMENTS
BP 1	LOCKING DEVICE MECHANICAL OPERATIONS	5,000 operations	After the specified number of operations, the specimens shall show no visual indication of fatigue or stress cracking of the locking device.
BP 2	MECHANICAL OPERATIONS PER IEC 60512-9-1, Test 9a	Mate connectors 1,250 cycles, at a maximum rate of 10mm/s maximum. Rest 1s (when mated and when unmated) Locking device inoperative.	
BP 3	FLOWING MIXED GAS CORROSION PER IEC 60512-11-7, Test 11g	Method 1 4 days Half of the samples in mated state Half of the samples in unmated state	
BP 4	CONTACT RESISTANCE IEC 60512-2-1, Test 2a	PER P3	20 mΩ maximum change from initial
BP 5	MECHANICAL OPERATIONS PER IEC 60512-9-1, Test 9a	Mate connectors 1,250 cycles, at a maximum rate of 10mm/s maximum. Rest 5s (when unmated) locking device inoperative.	
BP 6	CONTACT RESISTANCE IEC 60512-2-1, Test 2a	PER P3	20 mΩ maximum change from initial
BP 7	INSULATION RESISTANCE IEC 60512-3-1, Test 3a, Method a.	100V ± 15V d.c. Method a Mated connectors	PER P4
BP 8	VOLTAGE PROOF IEC 60512-4-1, Test 4a, Method a.	PER P5	PER P5
BP 9	VISUAL EXAMINATION	PER P1	PER P1

PRODUCT SPECIFICATION

6.0 SOLDERING CONDITIONS

RECOMMENDED

REFLOW SOLDERING SIMULATION PEAK PROFILE REFLOW AT 260 °C

DESCRIPTION	REQUIREMENT
Solder Type	None
Solder Flux Type	None
Paste Flux Type	None
Average Ramp Rate	3 °C/second maximum
Preheat Temperature	150 °C minimum; 200 °C maximum
Preheat Time	60 to 180 seconds
Ramp to Peak	3 °C/second maximum
Time over Liquidus (217 °C)	60 to 150 seconds
Peak Temperature	260 °C +0/-5 °C
Time within 5 °C of peak	20 to 40 seconds
Ramp – Cool Down	6 °C/second maximum
Time 25 °C to Peak	8 minutes maximum

PRODUCT SPECIFICATION

7.0 GAUGES AND FIXTURE

System resistance equals millivolt drop (mV) divided by test current (A)
(Conductor resistance will be deducted from measurement).

Arrangement for vibration test (test phase CP1)

Key

- 1 Fixed connector vibration feature.
- 2 Contact point.
- 3 Point A: secure to the non-vibrating member.
- 4 Point C: secure to the non-vibrating member.
- 5 Free connector.
- 6 Fixed connector rigidly fixed to the mounting plate.
- 7 Mounting plate.
- 8 Contact resistance measurement point.

Arrangement for vibration test
FROM IEC-60603-7

8.0 PACKAGING

Parts shall be packaged to protect against damage during handling, transit and storage.

9.0 QUALITY ASSURANCE PROVISIONS

The applicable Molex inspection plan specifies the sampling acceptable quality level to be used. Dimensioned and functional requirements shall be in accordance with applicable product drawings and this specification.
