Description

The Si554 quad-frequency VCXO utilizes Skyworks Solutions' advanced DSPLL® circuitry to provide a very low jitter clock for all output frequencies. The Si554 is available with any-rate output frequency from 10 to 945 MHz and selected frequencies to 1400 MHz. Unlike traditional VCXOs, where a different crystal is required for each output frequency, the Si554 uses one fixed crystal frequency to provide a wide range of output frequencies. This IC-based approach allows the crystal resonator to provide exceptional frequency stability and reliability. In addition, DSPLL clock synthesis provides superior supply noise rejection, simplifying the task of generating low jitter clocks in noisy environments typically found in communication systems. The Si554 IC-based VCXO is factory-configurable for a wide variety of user specifications including frequency, supply voltage, output format, tuning slope, and temperature stability. Specific configurations are factory-programmed at time of shipment, thereby eliminating the long lead times associated with custom oscillators.

The Si554 supports a variety of options including frequency, temperature stability, tuning slope, output format, and V_{DD} . Specific device configurations are programmed into the Si554 at time of shipment. Configurations are specified using the Part Number Configuration chart shown below. Skyworks Solutions provides a web browser-based part number configuration utility to simplify this process. Refer to <https://www.skyworksinc.com/en/Products/Timing> to access this tool and for further ordering instructions. The Si554 VCXO series is supplied in an industry-standard, RoHS-compliant, lead-free, 8-pad, 5 x 7 mm package. Tape and reel packaging is an ordering option.

Example Part Number: 554AF000124DGR is a 5 x 7 mm Quad VCXO in an 8 pad package. Since the six digit code (000124) is > 000100, f0 is 622.08 MHz (lowest frequency), f1 is 644.53125, f2 is 657.42188, and f3 is 669.32658 MHz (highest frequency), with a 3.3 V supply, LVPECL output, and Output Enable active high polarity. Temperature stability is specified as ± 50 ppm and the tuning slope is 135 ppm/V. The part is specified for a -40 to +85 °C ambient temperature range operation and is shipped in tape and reel format.
