XC6204/XC6205 Series

ETR03004-011d

300mA/150mA High Speed LDO Regulators with ON-OFF Control

■GENERAL DESCRIPTION

The XC6204/XC6205 series are highly precise, low noise, positive voltage LDO regulators manufactured using CMOS processes. The series achieves high ripple rejection and low dropout and consists of a standard voltage source, an error correction, current limiter and a phase compensation circuit plus a driver transistor.

Output voltage is selectable in 0.05V steps within a range of 0.9V ~ 6.0V.

The series is also compatible with low ESR ceramic capacitors which give added output stability. This stability can be maintained even during load fluctuations due to the excellent transient response of the series.

The current limiter's foldback circuit also operates as a short protect for the output current limiter and the output pin.

The CE function enables the output to be turned off, resulting in greatly reduced power consumption.

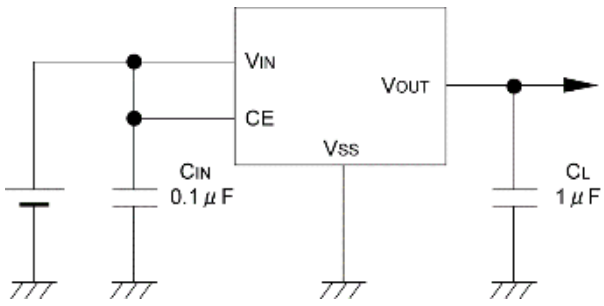

■APPLICATIONS

- ●Smart phones / Mobile phones
- ●Portable game consoles
- ●Digital still cameras / Camcorders
- ●Digital audio equipments
- ●Reference voltage sources
- ●Multi-function power supplies

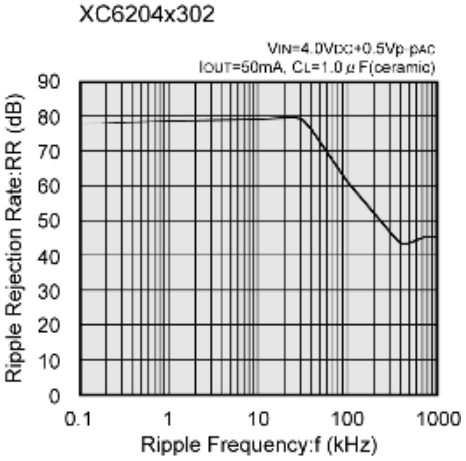

■FEATURES

Maximum Output Current : 150mA
300mA (XC6204 E to H type)
Dropout Voltage : 200mV @ 100mA
60mV @ 30mA
Operating Voltage : 2V ~ 10V
Output Voltage Range : 1.8V ~ 6.0V (XC6204)
0.9V ~ 1.75V (XC6205)
Highly Accurate : ±2%, ±1%
Low Power Consumption : 70μA
Standby Current : 0.01μA
High Ripple Rejection : 70dB@10kHz (XC6204)
60dB@10kHz (XC6205)
Low ESR Capacitor Compatible
: Ceramic capacitor
Operating Ambient Temperature
: -40℃~ 85℃
Packages : SOT-25, SOT-89-5, USP-6B
Environmentally Friendly : EU RoHS Compliant, Pb Free

■TYPICAL APPLICATION CIRCUIT

■BLOCK DIAGRAM

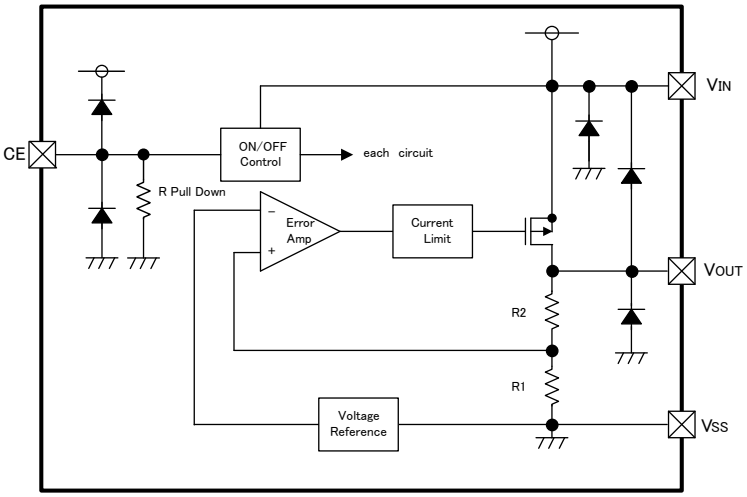

1) XC6204, XC6205 Series B, D, F, H Type

2) XC6204, XC6205 Series C, G Type

3) XC6204, XC6205 Series A, E Type

* Diodes shown in the above circuit are protective diodes.

■PRODUCT CLASSIFICATION

●Ordering Information

XC6204/XC6205①②③④⑤⑥−⑦

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①(*1)	Type of Regulator (CE pin Logic)	A	150mA Active High, pull-down resistor built-in (*2)(Semi-Custom)
		B	150mA Active High, no pull-down resistor built-in (Standard)
		C	150mA Active Low, pull-up resistor built-in (*2)(Semi-Custom)
		D	150mA Active Low, no pull-up resistor built-in (Semi-Custom)
		E	300mA(*1) Active High, pull-down resistor built-in (*2) (Semi-Custom)
		F	300mA(*1) Active High, no pull-down resistor built-in (Standard)
		G	300mA(*1) Active Low, pull-up resistor built-in (*2) (Semi-Custom)
		H	300mA(*1) Active Low, no pull-up resistor built-in (Semi-Custom)
②③	Output Voltage	09 ~ 17	XC6205
		18 ~ 60	XC6204 e.g. VOUT=2.0V→②=2, ③=0
④	Output Voltage Accuracy	2(*4)	0.1V increments, ±2% accuracy e.g. VOUT=2.8V, ±2%→②=3, ③=8, ④=2
		1(*3)	0.1V increments, ±1% accuracy e.g. VOUT=3.0V, ±1%→②=3, ③=0, ④=1
		A(*4)	0.05V increments, ±2% accuracy e.g. VOUT=2.85V, ±2%→②=2, ③=8, ④=A
		B(*3)	0.05V increments, ±1% accuracy e.g. VOUT=3.85V, ±1%→②=3, ③=8, ④=B
⑤⑥−⑦	Packages (Order Unit)	MR-G	SOT-25 (3,000pcs/Reel)
		DR-G	USP-6B (3,000pcs/Reel)
		PR-G	SOT-89-5 (1,000pcs/Reel)

(*1) E to H types are compatible to 300mA of XC6204 series. (XC6205 can not draw 300mA depending on output voltage.)

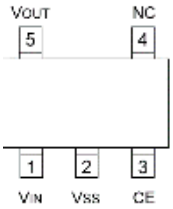

(*2) With the pull-up resistor or pull-down resistor built-in types, the supply current during operation will increase by V_{IN} / 300kΩ (TYP.)

(*3) Output voltage range of the ±1% accuracy product is 2.95V to 6.0V.

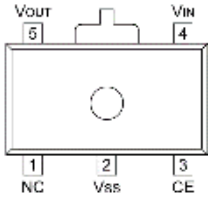

(*4) Output voltage accuracy of the $V_{OUT} \leqq 1.5V$ is ±30mV.

(*5) The “-G” suffix denotes Halogen and Antimony free as well as being fully EU RoHS compliant.

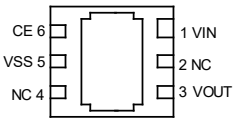

■PIN CONFIGURATION

SOT-25
(TOP VIEW)

SOT-89-5
(TOP VIEW)

USP-6B
(BOTTOM VIEW)

■PIN ASSIGNMENT

PIN NUMBER			PIN NAME	FUNCTIONS
SOT-25	SOT-89-5	USP-6B		
1	4	1	V_{IN}	Input
2	2	5	V_{SS}	Ground
3	3	6	CE	ON/OFF Control
4	1	2, 4	NC	No Connection
5	5	3	V_{OUT}	Output

■FUNCTIONS

Type	CE	OPERATIONAL STATE
A,B,E,F Type	H	ON
	L	OFF
C,D,G,H Type	H	OFF
	L	ON

H = High Level
L = Low Level

■ABSOLUTE MAXIMUM RATINGS

PARAMETER		SYMBOL	RATINGS	UNITS
Input Voltage		VIN	12.0	V
Output Current		IOUT	500 (*1)	mA
Output Voltage		VOUT	VSS - 0.3 ~ VIN + 0.3	V
CE Input Voltage		VCE	VSS - 0.3 ~ VIN + 0.3	V
Power Dissipation (Ta=25℃)	SOT-25	Pd	250 (IC only)	mW
			600 (40mm x 40mm Standard board)(*2)	
			760 (JESD51-7 board)(*2)	
	USP-6B		120 (IC only)	
			1000 (40mm x 40mm Standard board)(*2)	
	SOT-89-5		500 (IC only)	
			1300(40mm x 40mm Standard board)(*2)	
			1750 (JESD51-7 board)(*2)	
Operating Ambient Temperature		Topr	-40 ~ 85	℃
Storage Temperature		Tstg	-55 ~ 125	℃

(*1) $I_{OUT}=Pd/(V_{IN}-V_{OUT})$

(*2) The power dissipation figure shown is PCB mounted and is for reference only.
Please refer to PACKAGING INFORMATION for the mounting condition.

■TYPICAL APPLICATION CIRCUIT

■OPERATIONAL EXPLANATION

Output voltage control with the XC6204/6205 series:

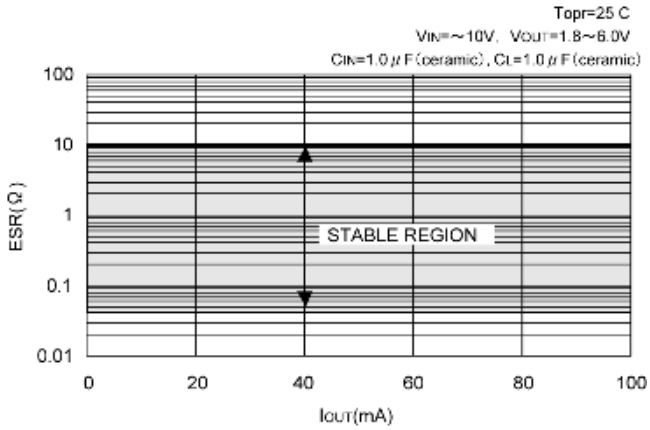

The voltage divided by resistors R1 & R2 is compared with the internal reference voltage by the error amplifier.

The P-channel MOSFET, which is connected to the VOUT pin, is then driven by the subsequent output signal. The output voltage at the VOUT pin is controlled & stabilized by a system of negative feedback.

The current limit circuit and short protect circuit operate in relation to the level of output current. Further, the IC's internal circuitry can be shutdown via the CE pin's signal.

< Low ESR Capacitors >

With the XC6204/05 series, a stable output voltage is achievable even if used with a low ESR capacitor as a phase compensation circuit is built-in. In order to ensure the effectiveness of the phase compensation, we suggest that an output capacitor (CL) is connected as close as possible to the output pin (VOUT) and the VSS pin. Please use an output capacitor with a capacitance value of at least 1 μF. Also, please connect an input capacitor (CIN) of 0.1 μF between the VIN pin and the VSS pin in order to ensure a stable power input.

● Recommended output capacitor values

VOUT	0.9V ~ 1.2V	1.25V ~ 1.75V
CL	4.7 μF	2.2 μF

<Current Limiter, Short-Circuit Protection>

The XC6204/05 series includes a combination of a fixed current limiter circuit & a foldback circuit, which aid the operations of the current limiter and circuit protection. When the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. As a result of this drop in output voltage, the foldback circuit operates, output voltage drops further and output current decreases. When the output pin is shorted, a current of about 50mA flows. However, when the input/output voltage differential is quite small, this current will be about 200mA.

■OPERATIONAL EXPLANATION (Continued)

<CE Pin>

The IC's internal circuitry can be shutdown via the signal from the CE pin with the XC6204/05 series. In shutdown mode, output at the VOUT pin will be pulled down to the VSS level via R1 & R2. The operational logic of the IC's CE pin is selectable (please refer to the selection guide). Note that as the standard XC6204/05B type is *' High Active/No Pull Down'*, operations will become unstable with the CE pin open. Although the CE pin is equal to an inverter input with CMOS hysteresis, with either the pull-up or pull-down options, the CE pin input current will increase when the IC is in operation.

We suggest that you use this IC with either a VIN voltage or a VSS voltage input at the CE pin. If this IC is used with the correct specifications for the CE pin, the operational logic is fixed and the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry if a voltage between 0.25V and 1.5V is input.

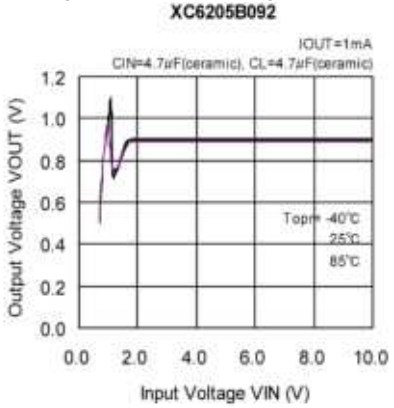

<Minimum Operating Voltage>

In order to stabilize the IC's operations, an input voltage of more than 2.0V is needed. Should the input voltage be less than 2.0V, the output voltage may not be regulated correctly. (Please refer to Input Voltage vs. Output Voltage characteristics below.)

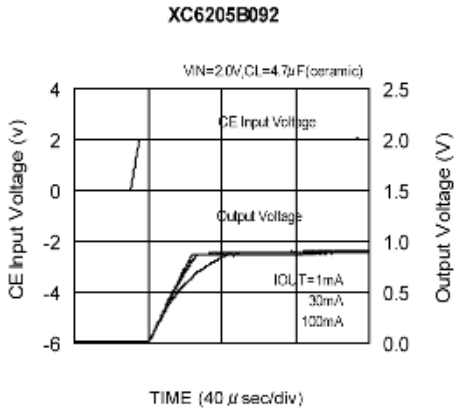

① When VIN is less than 2.0V, the CE pin remains in stand-by mode.
When VIN rises above 2.0V, the power supply will turn ON.

② The input power supply will begin to rise after a few hundred msec.
(Please also refer to the transient response characteristics.)

○ Enable Response Time

○ Turn-ON Response Time

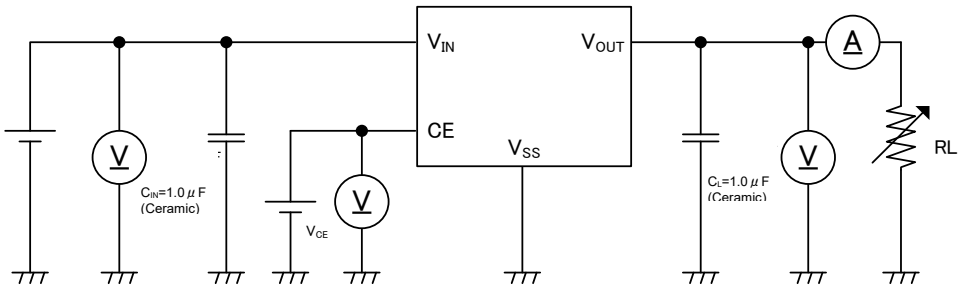

■NOTES ON USE

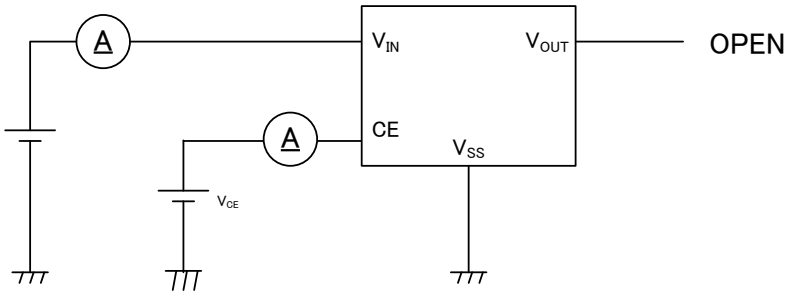

1. Please use this IC within the stated maximum ratings. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please strengthen V_{IN} and V_{SS} wiring in particular.
3. Please wire the input capacitor (C_{IN}) and the output capacitor (C_L) as close to the IC as possible.
4. Torex places an importance on improving our products and their reliability.
   We request that users incorporate fail-safe designs and post-aging protection treatment when using Torex products in their systems.

MARK	TYPE	PRODUCT SERIES
A	CE pin: High Active, Pull-Down Resistor Built-In	XC6204AxxxDx
B	CE pin: High Active, No Pull-Down Resistor Built-In	XC6204BxxxDx
C	CE pin: High Active, Pull-Up Resistor Built-In	XC6204CxxxDx
D	CE pin: Low Active, No Pull-Up Resistor Built-In	XC6204DxxxDx
E	CE pin: High Active, Pull-Down Resistor Built-In	XC6204ExxxDx
F	CE pin: High Active, No Pull-Down Resistor Built-In	XC6204FxxxDx
Z	CE pin: Low Active, Pull-Up Resistor Built-In	XC6204GxxxDx
H	CE pin: Low Active, No Pull-Up Resistor Built-In	XC6204HxxxDx

④ represents integer of the output voltage

MARK	VOLTAGE (V)	PRODUCT SERIES
3	3.X	XC6204x3xxDx
5	5.X	XC6204x5xxDx

⑤ represents decimal number of output voltage

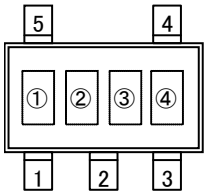

MARK	VOLTAGE (V)	PRODUCT SERIES	MARK	VOLTAGE (V)	PRODUCT SERIES
0	X.0	XC6204xx0xDx	A	X.05	XC6204xx0ADx
1	X.1	XC6204xx1xDx	B	X.15	XC6204xx1ADx
2	X.2	XC6204xx2xDx	C	X.25	XC6204xx2ADx
3	X.3	XC6204xx3xDx	D	X.35	XC6204xx3ADx
4	X.4	XC6204xx4xDx	E	X.45	XC6204xx4ADx
5	X.5	XC6204xx5xDx	F	X.55	XC6204xx5ADx
6	X.6	XC6204xx6xDx	H	X.65	XC6204xx6ADx
7	X.7	XC6204xx7xDx	K	X.75	XC6204xx7ADx
8	X.8	XC6204xx8xDx	L	X.85	XC6204xx8ADx
9	X.9	XC6204xx9xDx	M	X.95	XC6204xx9ADx

⑥ represents production lot number
0 to 9, A to Z repeated. (G, I, J, O, Q, W excluded)
Note: No character inversion used.

*No character inversion used.

1. The product and product specifications contained herein are subject to change without notice to improve performance characteristics. Consult us, or our representatives before use, to confirm that the information in this datasheet is up to date.

2. The information in this datasheet is intended to illustrate the operation and characteristics of our products. We neither make warranties or representations with respect to the accuracy or completeness of the information contained in this datasheet nor grant any license to any intellectual property rights of ours or any third party concerning with the information in this datasheet.

3. Applicable export control laws and regulations should be complied and the procedures required by such laws and regulations should also be followed, when the product or any information contained in this datasheet is exported.

4. The product is neither intended nor warranted for use in equipment of systems which require extremely high levels of quality and/or reliability and/or a malfunction or failure which may cause loss of human life, bodily injury, serious property damage including but not limited to devices or equipment used in 1) nuclear facilities, 2) aerospace industry, 3) medical facilities, 4) automobile industry and other transportation industry and 5) safety devices and safety equipment to control combustions and explosions. Do not use the product for the above use unless agreed by us in writing in advance.

5. Although we make continuous efforts to improve the quality and reliability of our products; nevertheless Semiconductors are likely to fail with a certain probability. So in order to prevent personal injury and/or property damage resulting from such failure, customers are required to incorporate adequate safety measures in their designs, such as system fail safes, redundancy and fire prevention features.

6. Our products are not designed to be Radiation-resistant.

7. Please use the product listed in this datasheet within the specified ranges.

8. We assume no responsibility for damage or loss due to abnormal use.

9. All rights reserved. No part of this datasheet may be copied or reproduced unless agreed by Torex Semiconductor Ltd in writing in advance.
