ISO773x-Q1 High-Speed, Robust-EMC Reinforced Triple-Channel Digital Isolators

1 Features

- Qualified for automotive applications
- AEC-Q100 Qualified with the following results:
  - Device temperature grade 1: –40°C to +125°C ambient operating temperature
- Functional Safety-Capable
  - Documentation available to aid functional safety system design: ISO7730-Q1, ISO7731-Q1
- 100Mbps data rate
- Robust isolation barrier:
  - >30-year projected lifetime at $1500V_{RMS}$ working voltage
  - Up to $5000V_{RMS}$ isolation rating
  - Up to 12.8kV surge capability
  - ±100kV/µs typical CMTI
- Wide supply range: 2.25V to 5.5V
- 2.25V to 5.5V Level translation
- Default output *high* (ISO773x) and *low* (ISO773xF) options
- Low power consumption, typical 1.5mA per channel at 1Mbps
- Low propagation delay: 11ns Typical (5V Supplies)
- Robust electromagnetic compatibility (EMC)
  - System-level ESD, EFT, and surge immunity
  - ±8kV IEC 61000-4-2 contact discharge protection across isolation barrier
  - Low emissions
- Wide-SOIC (DW-16) and QSOP (DBQ-16) package options
- Safety-related certifications:
  - DIN EN IEC 60747-17 (VDE 0884-17)
  - UL 1577 component recognition program
  - IEC 61010-1, IEC 62368-1, IEC 60601-1, and GB 4943.1 certifications

2 Applications

- Hybrid, electric and powertrain system (EV/HEV)
  - Battery management system (BMS)
  - On-board charger
  - Traction inverter
  - DC/DC converter
  - Inverter and motor control
- Body electronics
  - Automotive parking heater module
  - HVAC compressor module
  - HVAC control module
  - HVAC sensor
  - Interior heater module

Package Information

PART NUMBER(1)	PACKAGE	PACKAGE SIZE(2)
ISO7730-Q1 ISO7731-Q1	DW (SOIC, 16)	10.30mm × 7.50mm
	DBQ (SSOP, 16)	4.90mm × 3.90mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.
(2) The package size (length × width) is a nominal value and includes pins, where applicable.

An IMPORTANT NOTICE at the end of this data sheet addresses availability, warranty, changes, use in safety-critical applications, intellectual property matters and other important disclaimers. PRODUCTION DATA.

3 Description

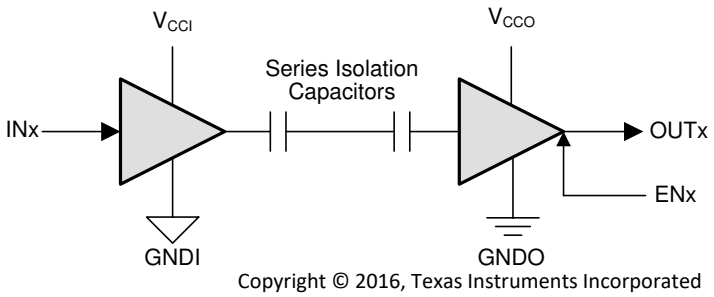

The ISO773x-Q1 devices are high-performance, triple-channel digital isolators with 5000V_{RMS} (DW package) and 3000V_{RMS} (DBQ package) isolation ratings per UL 1577.

This family includes devices with reinforced insulation ratings according to VDE, CSA, TUV and CQC.

The ISO773x-Q1 family of devices provides high electromagnetic immunity and low emissions at low power consumption, while isolating CMOS or LVCMOS digital I/Os. Each isolation channel has a logic input and output buffer separated by a double capacitive silicon dioxide (SiO_2) insulation barrier. This device comes with enable pins which can be used to put the respective outputs in high impedance for multi-controller driving applications and to reduce power consumption.

The ISO7730-Q1 device has all three channels in the same direction and the ISO7731-Q1 device has two forward and one reverse-direction channel. If the input power or signal is lost, the default output is *high* for devices without suffix F and *low* for devices with suffix F. See the *Device Functional Modes* section for further details.

Used in conjunction with isolated power supplies, this family of devices helps prevent noise currents on data buses, such as CAN and LIN, or other circuits from entering the local ground and interfering with or damaging sensitive circuitry. Through innovative chip design and layout techniques, electromagnetic compatibility of the ISO773x-Q1 device has been significantly enhanced to ease system-level ESD, EFT, surge, and emissions compliance. The ISO773x-Q1 family of devices is available in 16-pin wide-SOIC and QSOP packages.

5 Specifications

5.1 Absolute Maximum Ratings

See(1)

		MIN	MAX	UNIT
V_{CC1}, V_{CC2}	Supply voltage (2)	-0.5	6	V
V	Voltage at INx, OUTx, ENx	-0.5	V_{CCX} + 0.5 (3)	V
I_O	Output current	-15	15	mA
T_J	Junction temperature		150	°C
T_{stg}	Storage temperature	-65	150	°C

(1) Operation outside the Absolute Maximum Ratings may cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under Recommended Operating Conditions. If used outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.
(2) All voltage values except differential I/O bus voltages are with respect to the local ground terminal (GND1 or GND2) and are peak voltage values
(3) Maximum voltage must not exceed 6 V.

5.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per AEC Q100-002(1) HBM ESD Classification Level 3A	±6000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins	±1500	
		Contact discharge per IEC 61000-4-2; Isolation barrier withstand test(2) (3)	±8000	

(1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.
(2) IEC ESD strike is applied across the barrier with all pins on each side tied together creating a two-terminal device.
(3) Testing is carried out in air or oil to determine the intrinsic contact discharge capability of the device.

5.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
V_{CC1}, V_{CC2}	Supply voltage		2.25		5.5	V
$V_{CC(UVLO+)}$	UVLO threshold when supply voltage is rising			2	2.25	V
$V_{CC(UVLO-)}$	UVLO threshold when supply voltage is falling		1.7	1.8		V
$V_{HYS(UVLO)}$	Supply voltage UVLO hysteresis		100	200		mV
I_{OH}	High level output current	V_{CCO} (1) = 5 V	-4			mA
		V_{CCO} = 3.3 V	-2			
		V_{CCO} = 2.5 V	-1			
I_{OL}	Low level output current	V_{CCO} = 5 V			4	mA
		V_{CCO} = 3.3 V			2	
		V_{CCO} = 2.5 V			1	
V_{IH}	High-level input voltage		0.7 x V_{CCI} (1)		V_{CCI}	V
V_{IL}	Low-level input voltage		0		0.3 x V_{CCI}	V
DR (2)	Data rate		0		100	Mbps
T_A	Ambient temperature		-55	25	125	°C

(1) V_{CCI} = Input-side V_{CC}; V_{CCO} = Output-side V_{CC}
(2) 100 Mbps is the maximum specified data rate, although higher data rates are possible.

5.4 Thermal Information

THERMAL METRIC[1]		ISO773x		UNIT
		DW (SOIC)	DBQ (QSOP)	
		16 PINS	16 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	81.4	109	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	44.9	46.8	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	45.9	60.6	°C/W
ψ_{JT}	Junction-to-top characterization parameter	28.1	35.9	°C/W
ψ_{JB}	Junction-to-board characterization parameter	45.5	60	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	-	-	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application note.

5.5 Power Ratings

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
ISO7730-Q1						
P_D	Maximum power dissipation (both sides)	V_{CC1} = V_{CC2} = 5.5 V, T_J = 150°C, C_L = 15 pF, input a 50-MHz 50% duty cycle square wave			160	mW
P_{D1}	Maximum power dissipation (side-1)				30	mW
P_{D2}	Maximum power dissipation (side-2)				130	mW
ISO7731-Q1						
P_D	Maximum power dissipation (both sides)	V_{CC1} = V_{CC2} = 5.5 V, T_J = 150°C, C_L = 15 pF, input a 50-MHz 50% duty cycle square wave			160	mW
P_{D1}	Maximum power dissipation (side-1)				60	mW
P_{D2}	Maximum power dissipation (side-2)				100	mW

5.6 Insulation Specifications

PARAMETER		TEST CONDITIONS		VALUE		UNIT
				DW-16	DBQ-16	
CLR	External clearance(1)	Shortest terminal-to-terminal distance through air		>8	>3.7	mm
CPG	External creepage(1)	Shortest terminal-to-terminal distance across the package surface		>8	>3.7	mm
DTI	Distance through the insulation	Minimum internal gap (internal clearance)		>17	>17	µm
CTI	Comparative tracking index	DIN EN 60112 (VDE 0303-11); IEC 60112, UL 746A		>600	>600	V
	Material group	According to IEC 60664-1		I	I	
	Overvoltage category per IEC 60664-1	Rated mains voltage ≤ 150 V_{RMS}		I-IV	I-IV	
		Rated mains voltage ≤ 300 V_{RMS}		I-IV	I-III	
		Rated mains voltage ≤ 600 V_{RMS}		I-IV	n/a	
		Rated mains voltage ≤ 1000 V_{RMS}		I-III	n/a	
DIN EN IEC 60747-17 (VDE 0884-17) (2)						
V_{IORM}	Maximum repetitive peak isolation voltage	AC voltage (bipolar)	ISO773x	2121	566	V_{PK}
V_{IOWM}	Maximum working isolation voltage	AC voltage; Time dependent dielectric breakdown (TDDB) Test; SeeSection 8.2.3.1	ISO773x	1500	400	V_{RMS}
V_{IOWM}	Maximum working isolation voltage	DC voltage	ISO773x	2121	566	V_{DC}
V_{IOTM}	Maximum transient isolation voltage	V_{TEST} = V_{IOTM}, t = 60 s (qualification); V_{TEST} = 1.2 x V_{IOTM}, t= 1 s (100% production)		8000	4242	V_{PK}
V_{IMP}	Maximum impulse voltage(3)	Tested in air, 1.2/50-µs waveform per IEC 62368-1	ISO773x	8000	5000	V_{PK}
V_{IOSM}	Maximum surge isolation voltage(4)	V_{IOSM} ≥ 1.3 x V_{IMP}; Tested in oil (qualification test), 1.2/50-µs waveform per IEC 62368-1	ISO773x	12800	10000	V_{PK}
q_{pd}	Apparent charge(5)	Method a, After Input/Output safety test subgroup 2/3, V_{ini} = V_{IOTM}, t_{ini} = 60 s; $V_{pd(m)}$ = 1.2 x V_{IORM}, t_m = 10 s		≤5	≤5	pC
q_{pd}	Apparent charge(5)	Method a, After environmental tests subgroup 1, V_{ini} = V_{IOTM}, t_{ini} = 60 s;	$V_{pd(m)}$ = 1.6 x V_{IORM}, t_m = 10 s (ISO773x)	≤5	≤5	pC
q_{pd}	Apparent charge(5)	Method b; At routine test (100% production) and preconditioning (type test); V_{ini} = 1.2 x V_{IOTM}, t_{ini} = 1 s; $V_{pd(m)}$ = 1.875 x V_{IORM} (ISO773x) , t_m = 1 s (method b1) or $V_{pd(m)}$ = V_{ini}, t_m = t_{ini} (method b2)		≤5	≤5	pC
C_{IO}	Barrier capacitance, input to output(6)	V_{IO} = 0.4 x sin (2πft), f = 1 MHz		≅0.7	≅0.7	pF
R_{IO}	Isolation resistance(6)	V_{IO} = 500 V, T_A = 25°C		$>10^{12}$	$>10^{12}$	Ω
		V_{IO} = 500 V, 100°C ≤ T_A ≤ 125°C		$>10^{11}$	$>10^{11}$	
		V_{IO} = 500 V at T_S = 150°C		$>10^{9}$	$>10^{9}$	
	Pollution degree			2	2	
	Climatic category			55/125/21	55/125/21	
UL 1577						
V_{ISO}	Maximum withstanding isolation voltage	V_{TEST} = V_{ISO} , t = 60 s (qualification), V_{TEST} = 1.2 x V_{ISO}, t = 1 s (100% production)		5000	3000	V_{RMS}

(1) Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed-circuit board do not reduce this distance. Creepage and clearance on a printed-circuit board become equal in certain cases. Techniques such as inserting grooves and/or ribs on a printed-circuit board are used to help increase these specifications.

Copyright © 2024 Texas Instruments Incorporated

(2) This coupler is suitable for *safe electrical insulation* only within the safety ratings. Compliance with the safety ratings shall be ensured by means of suitable protective circuits.
(3) Testing is carried out in air to determine the surge immunity of the package
(4) Testing is carried out in oil to determine the intrinsic surge immunity of the isolation barrier.
(5) Apparent charge is electrical discharge caused by a partial discharge (pd).
(6) All pins on each side of the barrier tied together creating a two-terminal device.

5.8 Safety Limiting Values

Safety limiting(1) intends to minimize potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the I/O can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier potentially leading to secondary system failures.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
DW-16 PACKAGE						
I_S	Safety input, output, or supply current.	$R_{\theta JA}$ = 81.4°C/W, V_I = 5.5 V, T_J = 150°C, T_A = 25°C, see Figure 5-3			279	mA
		$R_{\theta JA}$ = 81.4°C/W, V_I = 3.6 V, T_J = 150°C, T_A = 25°C, see Figure 5-3			427	
		$R_{\theta JA}$ = 81.4°C/W, V_I = 2.75 V, T_J = 150°C, T_A = 25°C, see Figure 5-3			558	
P_S	Safety input, output, or total power	$R_{\theta JA}$ = 81.4°C/W, T_J = 150°C, T_A = 25°C, see Figure 5-3			1536	mW
T_S	Maximum safety temperature				150	°C
DBQ-16 PACKAGE						
I_S	Safety input, output, or supply current	$R_{\theta JA}$ = 109.0°C/W, V_I = 5.5 V, T_J = 150°C, T_A = 25°C, see Figure 5-4			209	mA
		$R_{\theta JA}$ = 109.0°C/W, V_I = 3.6 V, T_J = 150°C, T_A = 25°C, see Figure 5-4			319	
		$R_{\theta JA}$ = 109.0°C/W, V_I = 2.75 V, T_J = 150°C, T_A = 25°C, see Figure 5-4			417	
P_S	Safety input, output, or total power	$R_{\theta JA}$ = 109.0°C/W, T_J = 150°C, T_A = 25°C, see Figure 5-4			1147	mW
T_S	Maximum safety temperature				150	°C

(1) The maximum safety temperature, T_S, has the same value as the maximum junction temperature, T_J, specified for the device. The I_S and P_S parameters represent the safety current and safety power respectively. The maximum limits of I_S and P_S should not be exceeded. These limits vary with the ambient temperature, T_A.
The junction-to-air thermal resistance, $R_{\theta JA}$, in the table is that of a device installed on a high-K test board for leaded surface-mount packages. Use these equations to calculate the value for each parameter:
$T_J = T_A + R_{\theta JA} \times P$, where P is the power dissipated in the device.
$T_{J(max)} = T_S = T_A + R_{\theta JA} \times P_S$, where $T_{J(max)}$ is the maximum allowed junction temperature.
$P_S = I_S \times V_I$, where V_I is the maximum input voltage.

5.9 Electrical Characteristics—5-V Supply

V_{CC1} = V_{CC2} = 5 V ±10% (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{OH}	High-level output voltage	I_{OH} = -4 mA; See Figure 6-1	V_{CCO} - 0.4 (1)	4.8		V
V_{OL}	Low-level output voltage	I_{OL} = 4 mA; See Figure 6-1		0.2	0.4	V
$V_{IT+(IN)}$	Rising input switching threshold			0.6 x V_{CCI}	0.7 x V_{CCI}	V
$V_{IT-(IN)}$	Falling input switching threshold		0.3 x V_{CCI}	0.4 x V_{CCI}		V
$V_{I(HYS)}$	Input threshold voltage hysteresis		0.1 x V_{CCI}	0.2 x V_{CCI}		V
I_{IH}	High-level input current	V_{IH} = V_{CCI} (1) at INx			10	µA
I_{IL}	Low-level input current	V_{IL} = 0 V at INx	-10			µA
I_{IH}	High-level input current	V_{IH} = V_{CCI} (1) at ENx			28	µA
I_{IL}	Low-level input current	V_{IL} = 0 V at ENx	-28			µA
CMTI	Common mode transient immunity	V_I = V_{CCI} or 0 V, V_{CM} = 1200 V; See Figure 6-4	85	100		kV/µs
C_I	Input capacitance (2)	V_I = V_{CC}/ 2 + 0.4×sin(2πft), f = 1 MHz, V_{CC} = 5 V		2		pF

(1) V_{CCI} = Input-side V_{CC}; V_{CCO} = Output-side V_{CC}
(2) Measured from input pin to same side ground.

7 Detailed Description

7.1 Overview

The ISO773x-Q1 family of devices has an ON-OFF keying (OOK) modulation scheme to transmit the digital data across a silicon dioxide based isolation barrier. The transmitter sends a high frequency carrier across the barrier to represent one digital state and sends no signal to represent the other digital state. The receiver demodulates the signal after advanced signal conditioning and produces the output through a buffer stage. If the ENx pin is low then the output goes to high impedance. The ISO773x-Q1 family of devices also incorporates advanced circuit techniques to maximize the CMTI performance and minimize the radiated emissions due the high frequency carrier and IO buffer switching. The conceptual block diagram of a digital capacitive isolator, Figure 7-1, shows a functional block diagram of a typical channel.

7.2 Functional Block Diagram

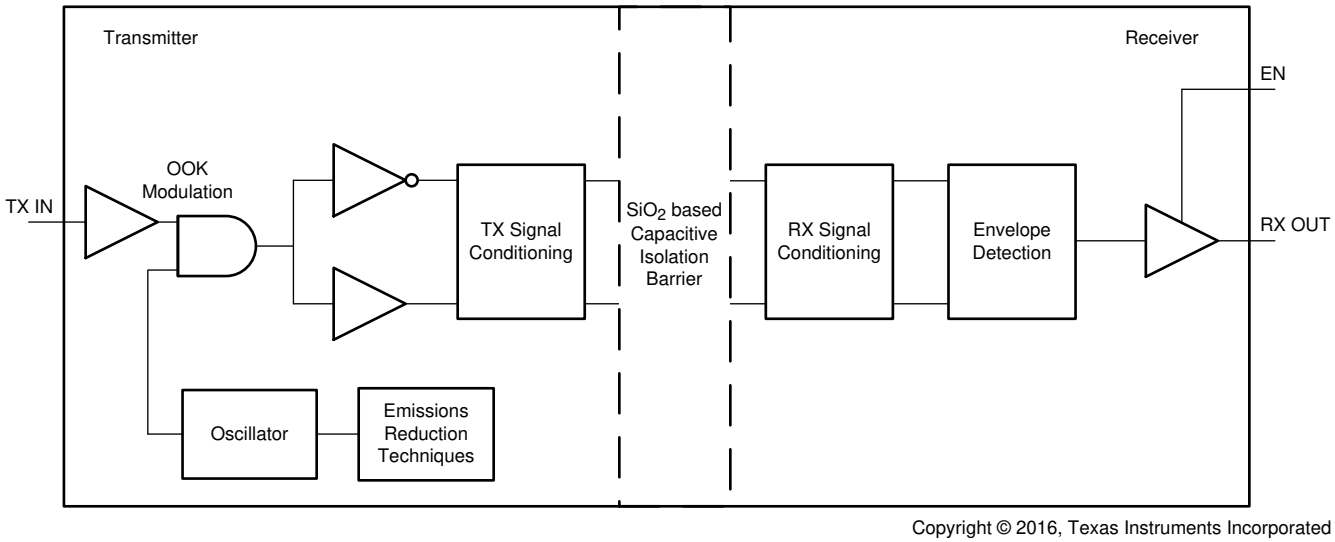

Figure 7-1. Conceptual Block Diagram of a Digital Capacitive Isolator

Figure 7-2 shows a conceptual detail of how the ON-OFF keying scheme works.

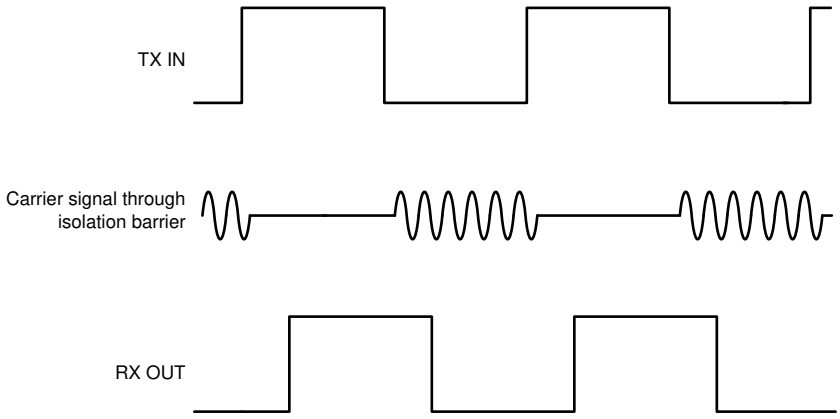

Figure 7-2. On-Off Keying (OOK) Based Modulation Scheme

7.3 Feature Description

Table 7-1 provides an overview of the device features.

Table 7-1. Device Features

PART NUMBER	CHANNEL DIRECTION	MAXIMUM DATA RATE	DEFAULT OUTPUT	PACKAGE	RATED ISOLATION(1)
ISO7730-Q1	3 Forward, 0 Reverse	100 Mbps	High	DW-16	5000 V_{RMS} / 8000 V_{PK}
				DBQ-16	3000 V_{RMS} / 4242 V_{PK}
ISO7730-Q1 with F suffix	3 Forward, 0 Reverse	100 Mbps	Low	DW-16	5000 V_{RMS} / 8000 V_{PK}
				DBQ-16	3000 V_{RMS} / 4242 V_{PK}
ISO7731-Q1	2 Forward, 1 Reverse	100 Mbps	High	DW-16	5000 V_{RMS} / 8000 V_{PK}
				DBQ-16	3000 V_{RMS} / 4242 V_{PK}
ISO7731-Q1 with F suffix	2 Forward, 1 Reverse	100 Mbps	Low	DW-16	5000 V_{RMS} / 8000 V_{PK}
				DBQ-16	3000 V_{RMS} / 4242 V_{PK}

(1) See *Section 5.7* for detailed isolation ratings.

7.3.1 Electromagnetic Compatibility (EMC) Considerations

Many applications in harsh industrial environment are sensitive to disturbances such as electrostatic discharge (ESD), electrical fast transient (EFT), surge and electromagnetic emissions. These electromagnetic disturbances are regulated by international standards such as IEC 61000-4-x and CISPR 22. Although system-level performance and reliability depends, to a large extent, on the application board design and layout, the ISO773x-Q1 family of devices incorporates many chip-level design improvements for overall system robustness. Some of these improvements include:

- Robust ESD protection cells for input and output signal pins and inter-chip bond pads.
- Low-resistance connectivity of ESD cells to supply and ground pins.
- Enhanced performance of high voltage isolation capacitor for better tolerance of ESD, EFT and surge events.
- Bigger on-chip decoupling capacitors to bypass undesirable high energy signals through a low impedance path.
- PMOS and NMOS devices isolated from each other by using guard rings to avoid triggering of parasitic SCRs.
- Reduced common mode currents across the isolation barrier by providing purely differential internal operation.

7.4 Device Functional Modes

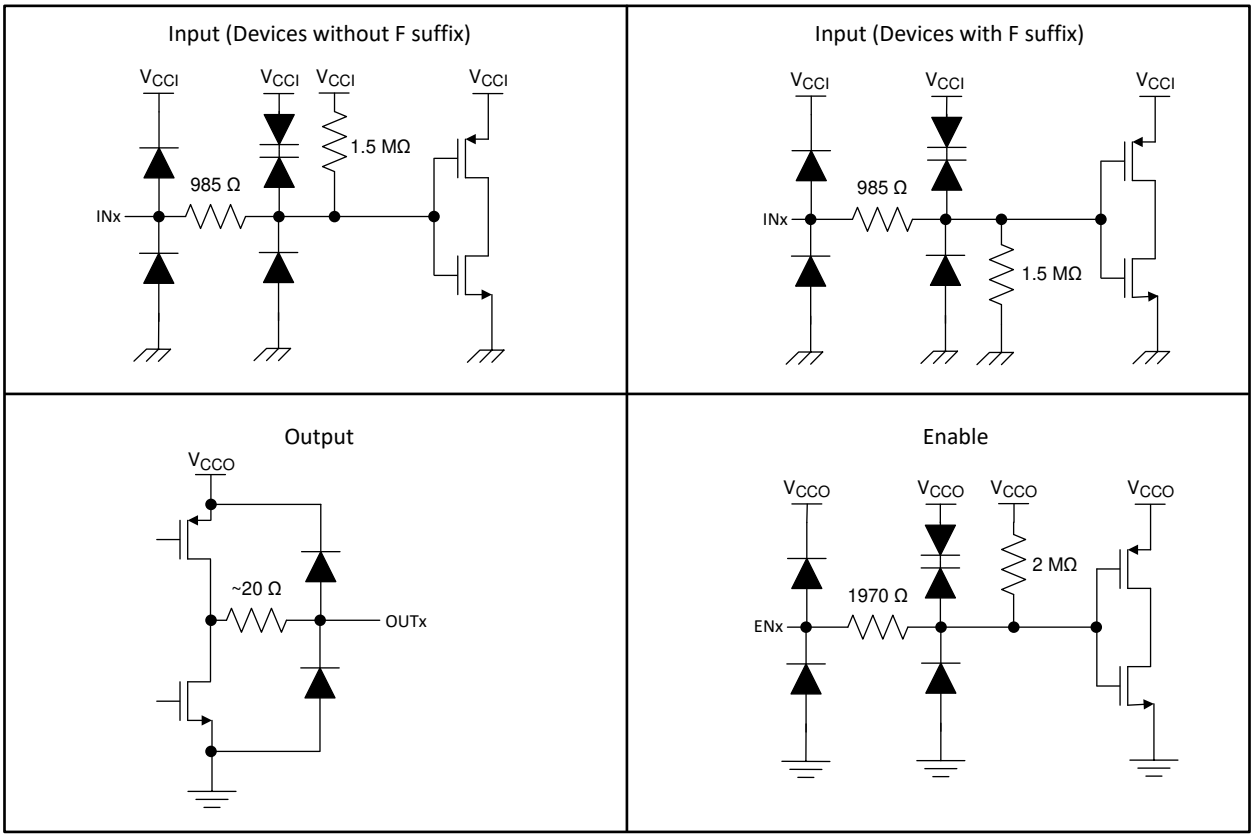

Table 7-2 lists the functional modes for the ISO773x-Q1 devices.

Table 7-2. Function Table

V_{CCI} (1)	V_{CCO}	INPUT (INx)(3)	OUTPUT ENABLE (ENx)	OUTPUT (OUTx)	COMMENTS
PU	PU	H	H or open	H	Normal Operation: A channel output assumes the logic state of the input.
		L	H or open	L	
		Open	H or open	Default	Default mode: When INx is open, the corresponding channel output goes to the default logic state. Default is *High* for ISO773x-Q1 and *Low* for ISO773x-Q1 with F suffix.
X	PU	X	L	Z	A low value of Output Enable causes the outputs to be high-impedance
PD	PU	X	H or open	Default	Default mode: When V_{CCI} is unpowered, a channel output assumes the logic state based on the selected default option. Default is *High* for ISO773x-Q1 and *Low* for ISO773x-Q1 with F suffix. When V_{CCI} transitions from unpowered to powered-up, a channel output assumes the logic state of the input. When V_{CCI} transitions from powered-up to unpowered, channel output assumes the selected default state.
X	PD	X	X	Undetermined	When V_{CCO} is unpowered, a channel output is undetermined(2). When V_{CCO} transitions from unpowered to powered-up, a channel output assumes the logic state of the input

(1) V_{CCI} = Input-side V_{CC}; V_{CCO} = Output-side V_{CC}; PU = Powered up (V_{CC} ≥ 2.25 V); PD = Powered down (V_{CC} ≤ 1.7 V); X = Irrelevant; H = High level; L = Low level ; Z = High Impedance
(2) The outputs are in undetermined state when 1.7 V < V_{CCI}, V_{CCO} < 2.25 V.
(3) A strongly driven input signal can weakly power the floating V_{CC} using an internal protection diode and cause undetermined output.

8 Application and Implementation

Note

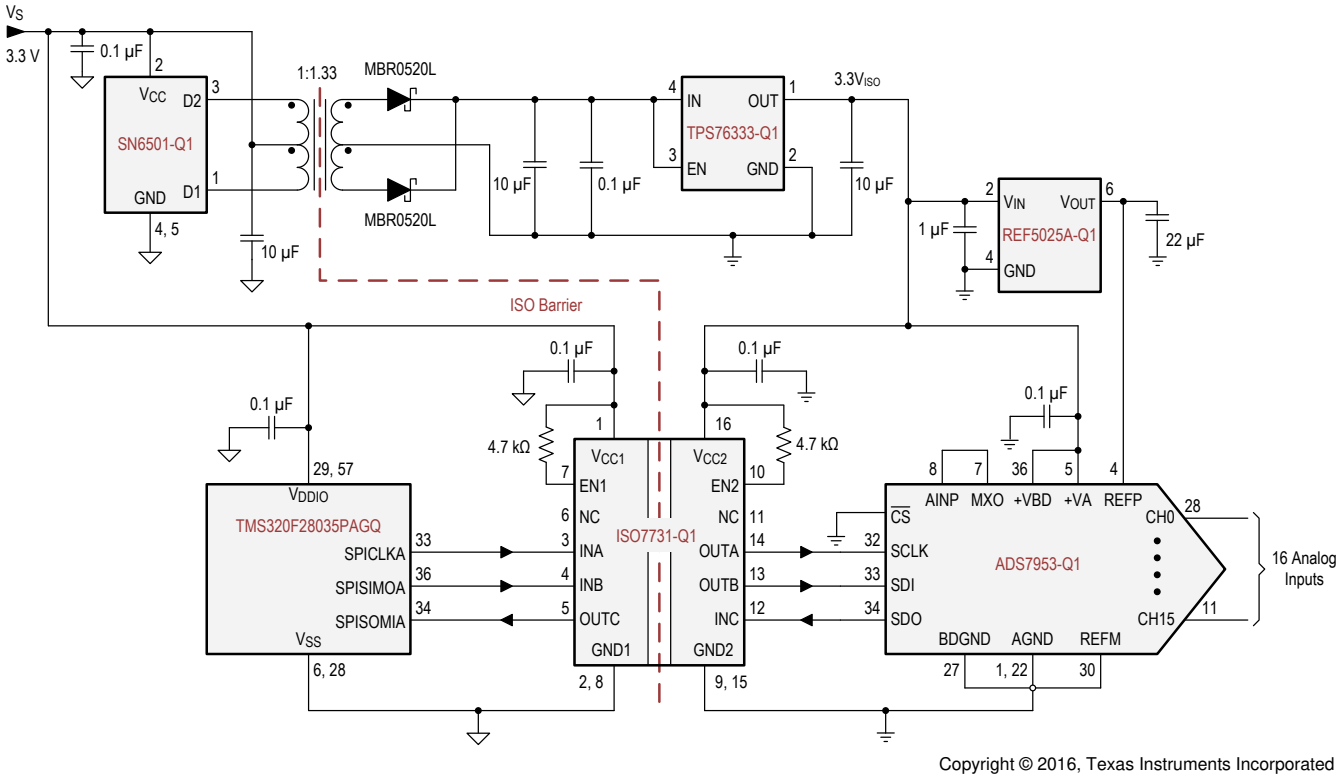

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

8.1 Application Information

The ISO773x-Q1 devices are high-performance, triple-channel digital isolators. These devices come with enable pins on each side which can be used to put the respective outputs in high impedance for multi-master driving applications and reduce power consumption. The ISO773x-Q1 family of devices use single-ended CMOS-logic switching technology. The voltage range is from 2.25 V to 5.5 V for both supplies, V_{CC1} and V_{CC2}. When designing with digital isolators, keep in mind that because of the single-ended design structure, digital isolators do not conform to any specific interface standard and are only intended for isolating single-ended CMOS or TTL digital signal lines. The isolator is typically placed between the data controller (that is, µC or UART), and a data converter or a line transceiver, regardless of the interface type or standard.

8.2 Typical Application

The ISO7731-Q1 device combined with Texas Instruments' Piccolo™ microcontroller, analog-to-digital receiver, transformer driver, and voltage regulator can create an isolated serial peripheral interface (SPI) as shown in Figure 8-1.

Multiple pins and discrete components are omitted for clarity.

Figure 8-1. Isolated SPI for an Analog Input Module With 16 Inputs and a Single Slave

Copyright © 2024 Texas Instruments Incorporated

8.2.1 Design Requirements

To design with these devices, use the parameters listed in Table 8-1.

Table 8-1. Design Parameters

PARAMETER	VALUE
Supply voltage, V_{CC1} and V_{CC2}	2.25 to 5.5 V
Decoupling capacitor between V_{CC1} and GND1	0.1 µF
Decoupling capacitor from V_{CC2} and GND2	0.1 µF

8.2.2 Detailed Design Procedure

Unlike optocouplers, which require external components to improve performance, provide bias, or limit current, the ISO773x-Q1 family of devices only requires two external bypass capacitors to operate. Figure 8-2 and Figure 8-3 show the typical circuit hook-up for the devices.

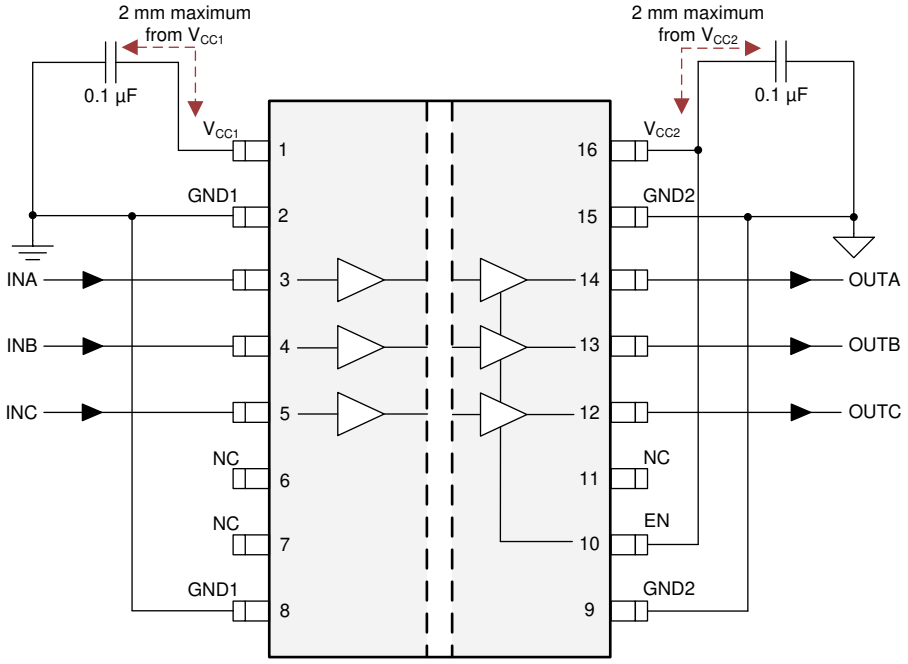

Figure 8-2. Typical ISO7730-Q1 Circuit Hook-Up

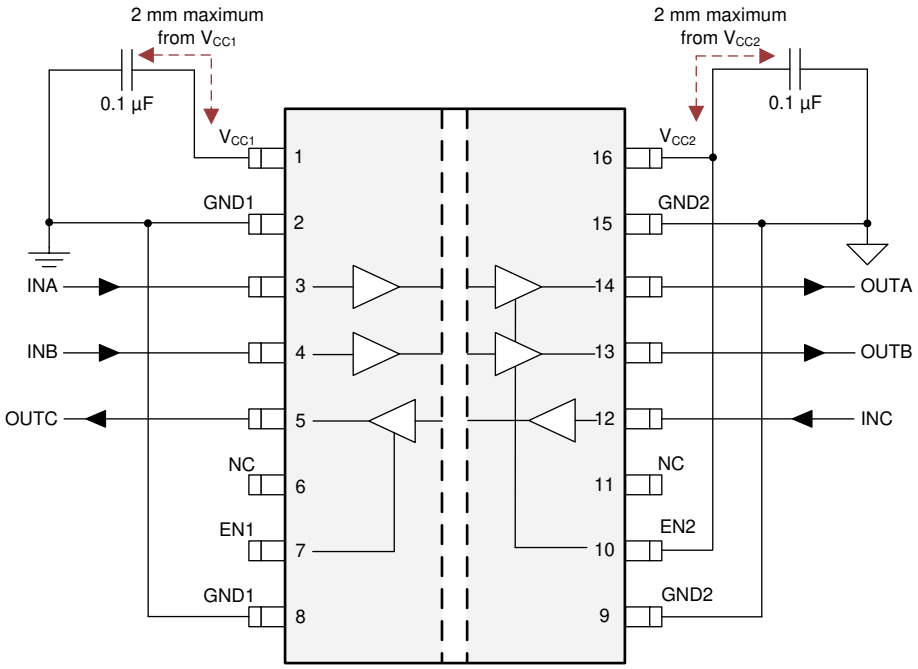

Figure 8-3. Typical ISO7731-Q1 Circuit Hook-Up

8.2.3 Application Curves

The following typical eye diagrams of the ISO773x-Q1 family of devices indicate low jitter and wide open eye at the maximum data rate of 100 Mbps.

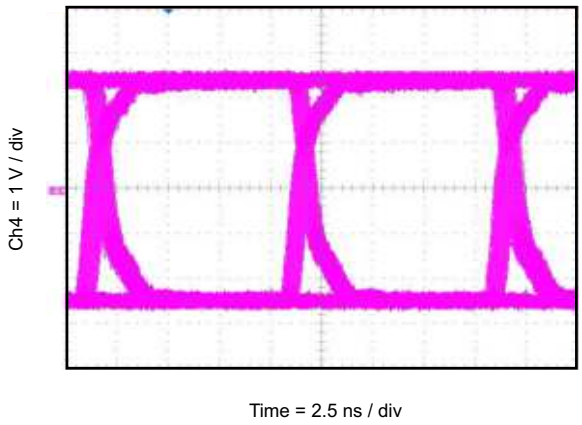

Figure 8-4. Eye Diagram at 100 Mbps PRBS 2^{16} – 1, 5 V and 25°C

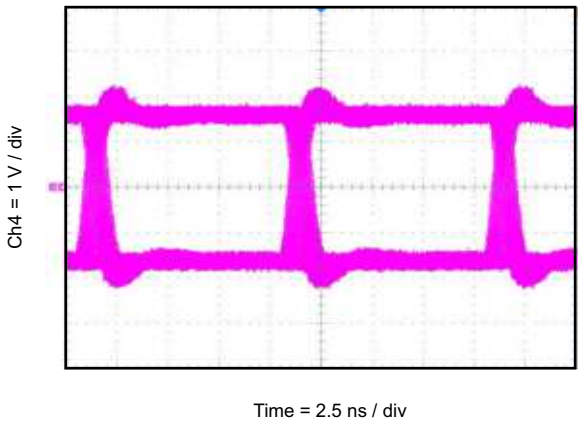

Figure 8-5. Eye Diagram at 100 Mbps PRBS 2^{16} – 1, 3.3 V and 25°C

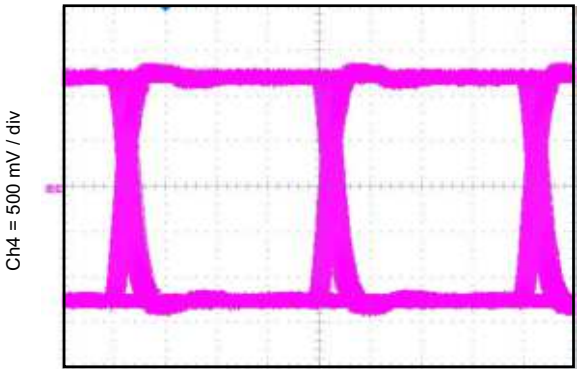

Figure 8-6. Eye Diagram at 100 Mbps PRBS 2^{16} – 1, 2.5 V and 25°C

8.2.3.1 *Insulation Lifetime*

Insulation lifetime projection data is collected by using industry-standard Time Dependent Dielectric Breakdown (TDDB) test method. In this test, all pins on each side of the barrier are tied together creating a two-terminal device and high voltage applied between the two sides; See Figure 8-7 for TDDB test setup. The insulation breakdown data is collected at various high voltages switching at 60 Hz over temperature. For reinforced insulation, VDE standard requires the use of TDDB projection line with failure rate of less than 1 part per million (ppm). Even though the expected minimum insulation lifetime is 20 years at the specified working isolation voltage, VDE reinforced certification requires additional safety margin of 20% for working voltage and 50% for lifetime which translates into minimum required insulation lifetime of 30 years at a working voltage that's 20% higher than the specified value.

Figure 8-8 shows the intrinsic capability of the isolation barrier to withstand high voltage stress over the lifetime of the barrier. Based on the TDDB data, the intrinsic capability of the insulation is 1500 V_{RMS} with a lifetime of 36 years. Other factors, such as package size, pollution degree, material group, and more can further limit the working voltage of the component. The working voltage of DW-16 package is specified up to 1500 V_{RMS}. At the lower working voltages, the corresponding insulation lifetime is much longer than 36 years. DBQ-16 package at 400 V_{RMS} working voltage has a much longer lifetime than DW-16 package.

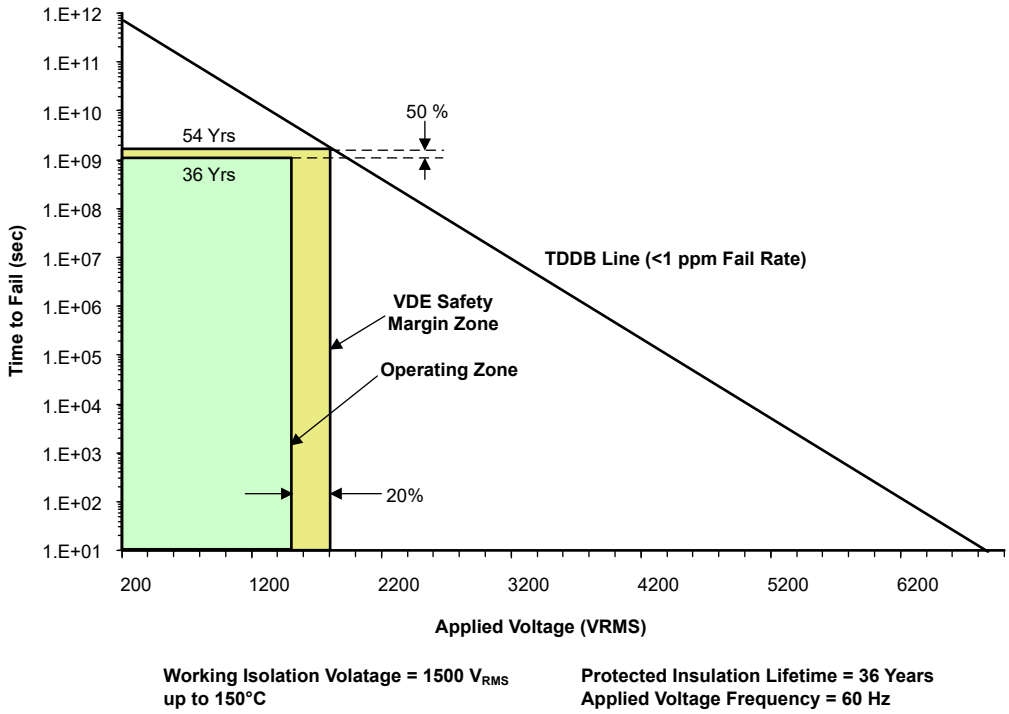

Figure 8-8. Insulation Lifetime Projection Data

8.3 Power Supply Recommendations

To help provide reliable operation at data rates and supply voltages, a 0.1-µF bypass capacitor is recommended at the input and output supply pins (V_{CC1} and V_{CC2}). The capacitors must be placed as close to the supply pins as possible. If only a single primary-side power supply is available in an application, isolated power can be generated for the secondary-side with the help of a transformer driver such as Texas Instruments' SN6501-Q1 . For such applications, detailed power supply design and transformer selection recommendations are available in the *SN6501-Q1 Transformer Driver for Isolated Power Supplies* data sheet .

8.4 Layout

8.4.1 Layout Guidelines

A minimum of four layers is required to accomplish a low EMI PCB design (see Figure 8-9). Layer stacking must be in the following order (top-to-bottom): high-speed signal layer, ground plane, power plane and low-frequency signal layer.

- Routing the high-speed traces on the top layer avoids the use of vias (and the introduction of the inductances) and allows for clean interconnects between the isolator and the transmitter and receiver circuits of the data link.
- Placing a solid ground plane next to the high-speed signal layer establishes controlled impedance for transmission line interconnects and provides an excellent low-inductance path for the return current flow.
- Placing the power plane next to the ground plane creates additional high-frequency bypass capacitance of approximately 100 pF/inch^2.
- Routing the slower speed control signals on the bottom layer allows for greater flexibility as these signal links usually have margin to tolerate discontinuities such as vias.

If an additional supply voltage plane or signal layer is needed, add a second power or ground plane system to the stack to keep the planes symmetrical. This makes the stack mechanically stable and prevents warping. Also the power and ground plane of each power system can be placed closer together, thus increasing the high-frequency bypass capacitance significantly.

For detailed layout recommendations, refer to the *Digital Isolator Design Guide*.

8.4.1.1 PCB Material

For digital circuit boards operating below 150 Mbps, (or rise and fall times higher than 1 ns), and trace lengths of up to 10 inches, use standard FR-4 UL94V-0 printed circuit boards. This PCB is preferred over cheaper alternatives due to the lower dielectric losses at high frequencies, less moisture absorption, greater strength and stiffness, and self-extinguishing flammability-characteristics.

8.4.2 Layout Example

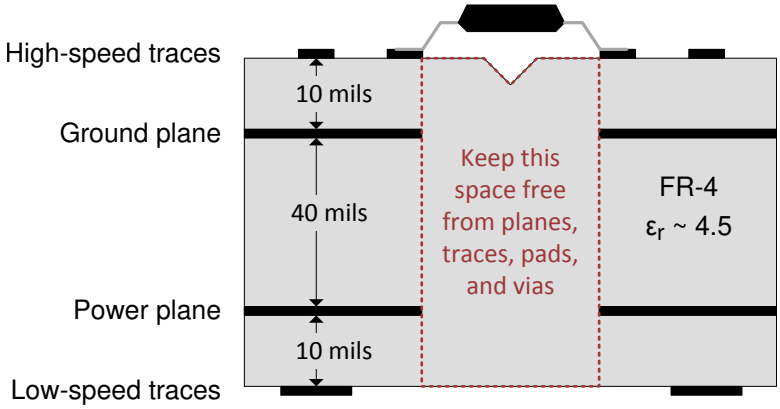

Figure 8-9. Layout Example Schematic

9 Device and Documentation Support

9.1 Documentation Support

9.1.1 Related Documentation

For related documentation, see the following:

9.3 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

9.4 Support Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

9.5 Trademarks

Piccolo™ is a trademark of Texas Instruments.
TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

9.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

9.7 Glossary

TI Glossary — This glossary lists and explains terms, acronyms, and definitions.

10 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Copyright © 2024 Texas Instruments Incorporated

Changes from Revision E (August 2023) to Revision F (October 2024) **Page**

- Updated numbering format for tables, figures and cross-references throughout document ... 1
- Updated Thermal Characteristics, Safety Limiting Values, and Thermal Derating Curves to provide more accurate system-level thermal calculations ... 6
- Updated electrical and switching characteristics to match device performance ... 6
- Updated maximum power dissipation in the power ratings section ... 8
- Updated distance through isolation, while maintaining all other insulation specifications ... 9
- Updated table entries ... 11
- Updated the input leakage current for ENx pins throughout the electrical characteristic sections ... 13
- Updated maximum total current consumption values throughout the supply current characteristics sections ... 14
- Updated maximum propagation delay specifications throughout the switching characteristics sections ... 19
- Updated the TDDB plot and the projected lifetime ... 33

Changes from Revision D (October 2020) to Revision E (August 2023) **Page**

- Changed standard name from: "DIN V VDE V 0884-11:2017-01" to: "DIN EN IEC 60747-17 (VDE 0884-17)" throughout the document ... 1
- Removed standard revision and year references from all standard names throughout the document ... 1
- Added V_{TEST} conditions for V_{IOTM}, updated DBQ package throughout the document, and updated method b1 condition ... 9
- Changed working voltage lifetime margin from: 87.5% to: 50%, minimum required insulation lifetime from: 37.5 years to: 30 years and insulation lifetime per TDDB from: 135 years to: 169 years per DIN EN IEC 60747-17 (VDE 0884-17) ... 33
- Changed Figure 8-8 per DIN EN IEC 60747-17 (VDE 0884-17 ... 33

11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. (1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm, per side.
5. Reference JEDEC registration MS-013.

LAND PATTERN EXAMPLE
SCALE:4X

SOLDER MASK DETAILS

4221009/B 07/2016

NOTES: (continued)

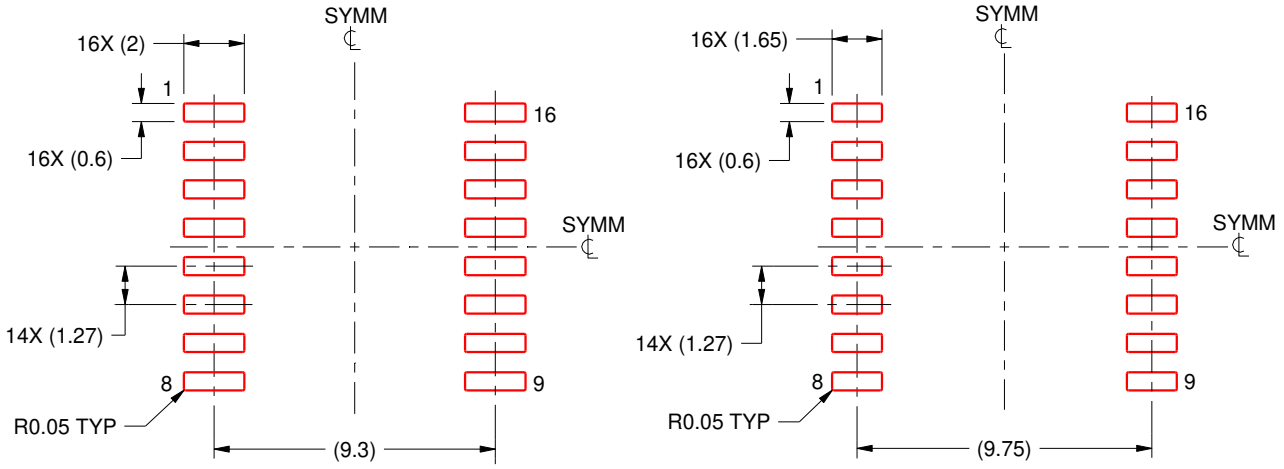

6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

DW0016B

SOIC - 2.65 mm max height

SOIC

IPC-7351 NOMINAL
7.3 mm CLEARANCE/CREEPAGE

HV / ISOLATION OPTION
8.1 mm CLEARANCE/CREEPAGE

SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE:4X

4221009/B 07/2016

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

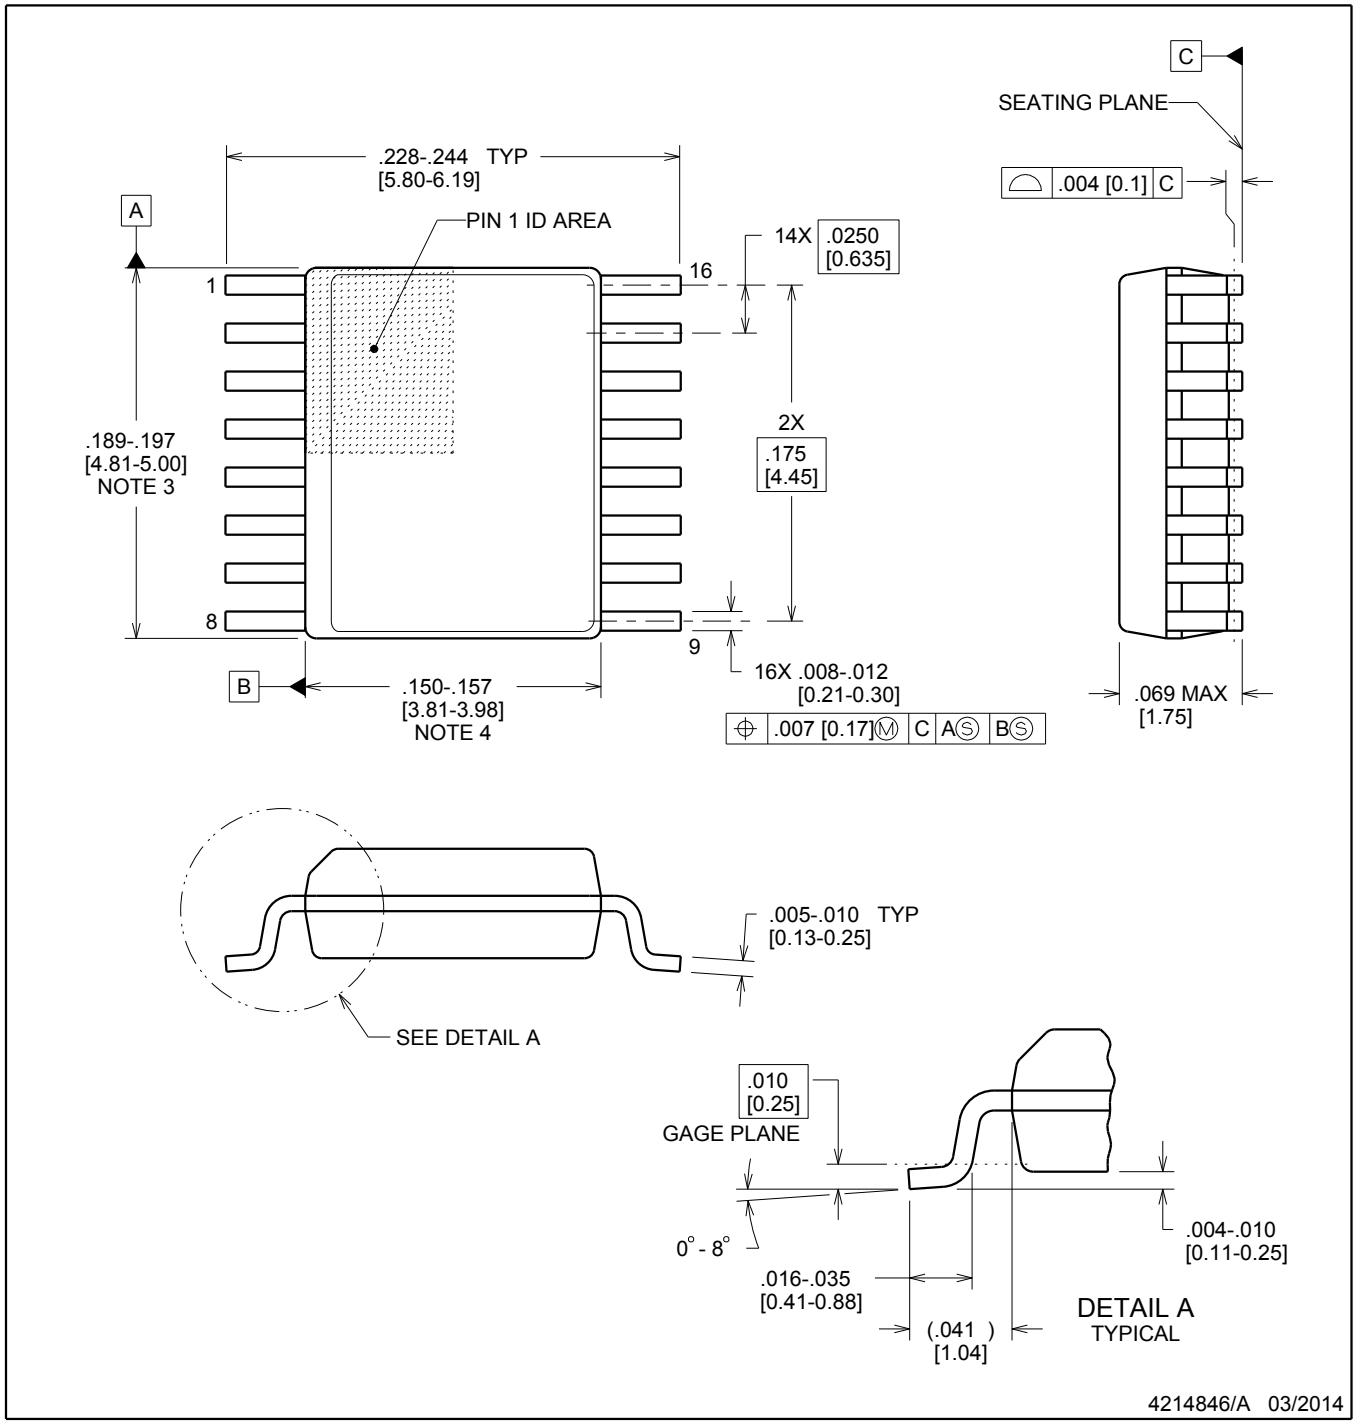

PACKAGE OUTLINE

DBQ0016A

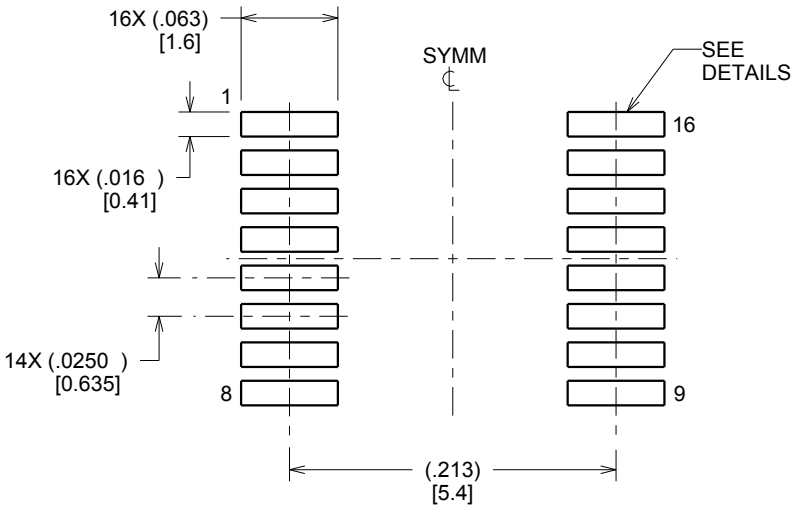

SSOP - 1.75 mm max height

SHRINK SMALL-OUTLINE PACKAGE

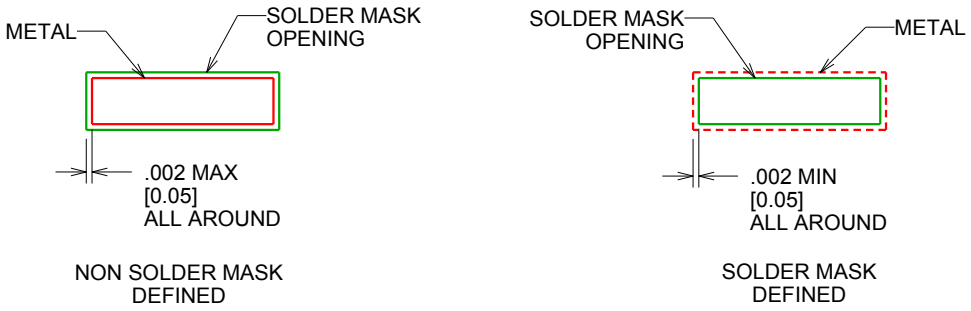

NOTES:

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 inch, per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MO-137, variation AB.

LAND PATTERN EXAMPLE
SCALE:8X

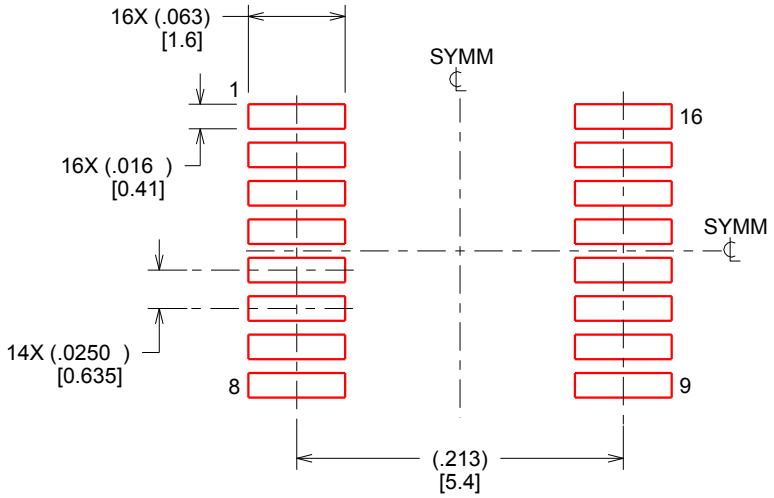

SOLDER MASK DETAILS

4214846/A 03/2014

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SOLDER PASTE EXAMPLE
BASED ON .005 INCH [0.127 MM] THICK STENCIL
SCALE:8X

4214846/A 03/2014

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES “AS IS” AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you fully indemnify TI and its representatives against any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI’s products are provided subject to TI’s Terms of Sale, TI’s General Quality Guidelines, or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI’s provision of these resources does not expand or otherwise alter TI’s applicable warranties or warranty disclaimers for TI products. Unless TI explicitly designates a product as custom or customer-specified, TI products are standard, catalog, general purpose devices.
